

Job Posting: Postdoctoral Research Associate

Cervical Cancer Screening Services for Inuit Women of Nunavik.

A team of researchers from **McGill University** is currently conducting a mixed methods study designed to improve cervical cancer screening access and medical follow-up for Inuit women in Northern Quebec. This CIHR-funded project involves a community-based participatory research design. We will be working with Inuit communities towards the development of educational and promotional activities for Inuit women and community and health care providers. Together we will be implementing a new screening procedure (HPV self-sampling) and monitoring and evaluating screening-related outcomes.

We are seeking a **research associate or a postdoctoral fellow** for a minimum of 24 months and maximum of 4 years to contribute to this project.

The successful candidate must be bilingual (French and English) and have a PhD (from an academic discipline such as: anthropology, epidemiology, family medicine, nursing, public health, sociology, or social work). Experience with participatory research and Indigenous health research is an asset. They must be familiar with both epidemiology and ethnographic research methodologies, and have experience with qualitative and quantitative analysis. They must be able to work independently. They will be responsible for project coordination as well as data collection, management, analysis and knowledge mobilization. Inuk scholar encouraged to apply.

Salary: to be determined based on experience.

Start date: Immediately

Review of applications will proceed on a rolling basis and will continue until this position is filled. Applications should include a cover letter describing interest, a CV, and the contact information for two references (one of whom must be an academic referee).
